

DC Department of Corrections reports new positive cases of COVID-19

The DC Department of Corrections (DC DOC) has been notified that seven additional residents in DOC custody have tested positive for COVID-19. A total of 44 residents who tested positive are in isolation and 52 individuals who recovered from their illness have been returned to the general population.

Information on the new positive cases:

- 18 year old male;
- 19 year old male;
- 21 year old male;
- 36 year old male;
- 40 year old male; and
- two 42 year old males

All seven of the residents were housed at the Central Detention Facility. The residents are currently in isolation and being monitored by medical staff according to guidelines from the Centers for Disease Control and Prevention (CDC) and DC Health.

The DC DOC's Medical Department and Unity Healthcare use the CDC's "Interim Guidance on Management of Coronavirus Disease 2019 (COVID-19) in Correctional and Detention Facilities" to determine if a resident is cleared to be released from isolation and returned to the general population.

This determination requires the resident to be free from fever for at least 72 hours without the use of fever-reducing medications; improvements in the resident's other symptoms, such as coughing and shortness of breath; and at least 7 days have passed since the first symptoms appeared.

DC DOC's Medical Department and Unity Healthcare are working with DC Health on contact tracing and to protect the health and wellbeing of all individuals in DOC's facilities.

Take care of yourself and one another. If you feel sick, do not come to work. Your health and safety are our top priority.
